MEASUREMENTS AND SIZING YOUR RIG

Your new harness/container system is custom built to fit your body. It is very important that all the body measurements are taken as accurately as possible. This will help us build the rig that is properly fitted for both safety and comfort. It is highly recommended that your measurements are taken by an experienced skydiving equipment dealer.

Important Guidelines for performing measurements:

Wear the clothing layers and jumpsuit that you typically wear while skydiving
Do not wear shoes

Measure Twice

Keep measuring tape close and snug against the body
Stand up straight, arms down
Measure to the closest 1/2"

Your new Triton comes with these standard features and components:

Harness Container Assembly, CAD Hardware, Main Risers, Velcro-less Main Toggles, Release Handle, Reserve Pilotchute, Freebag and Bridle, Reserve Static Line (RSL), Reserve Toggles, Metal Reserve Ripcord (D-Handle) Main Throw-Out Pilotchute and bridle (PVC), Main Deployment Bag, AAD Set-up, Silver Embroidered Logo, Owners Manual
